

TECHNICAL NEWSLETTER PALLET WRAPPER – PR 202 PLC & TOUCH SCREEN OPTION

We are proud to inform you that, in order to always provide efficient and innovative products, we have developed the possibility, as an **option**, to install a **PLC (Siemens) and a Touch-Screen** control panel on our semi-automatic pallet wrapper **PR 202**.

This solution will sensibly increase the "flexibility" of the machine, the possibilities to customize it following the customer needs and it is for sure an important technological upgrade for this kind of machine.

This new improvement is available starting from November 20th 2013.

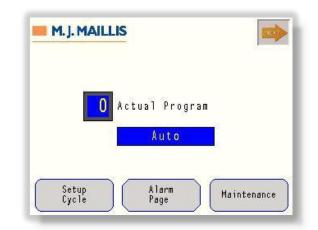

The PR 202 is equipped with a new user interface by PLC & Touch-Screen (optional) through which it is possible either entering or receiving data and information of the wrapping process.

The management of the main menu is highly intuitive and allows the operator to enter data such as:

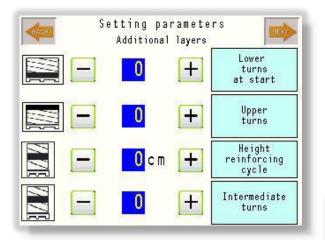

- Working cycle (either automatic or manual)
- Operating speed
- Programs selections
- Turntable, carriage parameters setting
- Operating speed

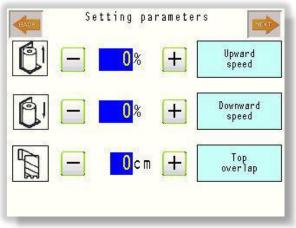

- Information on procedures to start up the machine
- Guidelines for manual cycles management
- Information about current state of the process
- Indications of failures (alarms) that may occur
- Guidelines for a rapid identification of any alarms and their solution

The new user interface by Touch-Screen is highly simple and intuitive and, through this it is possible to manage all operating parameters of the wrapping process.

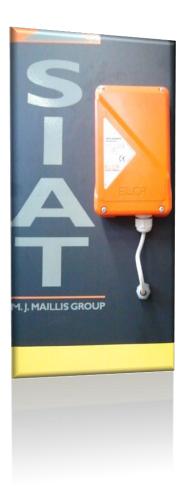

Every machine parameter as well as the language are settable.

ESC	1	2	3	4	5	B
CAPS	6	7	8	9	0	CLI
А	В	С	D	Е	F	G
Н	T	J	К	L	Μ	N
0	Ρ	Q	R	S	Т	EN
υ	٧	W	Х	Y	Z	T

The use of this new interface enables optional systems of high and extremely sophisticated level.

For example : External unit of remote control

Programmable remote control to manage machine functionality / work programs.
